Obviously I am biased.

What Is Code? In this article on Bloomberg, Paul Ford gives an insight into the passionate world of Python community. Al is one of the newest disciplines. It was formally initiated in 1956, when the name was coined, although at the point work had been underway for about five years. Along with modern genetics, it is regularly citied as the "field I would like to be in" by scientist in other disciplines. A student in physics might reasonably feel that all good ideas have been taken by Galileo, Newton, Einstein, and the rest, and that it takes many years of study before one can contribute new ideas. Al, on the other hand, still has openings for a full-time Einstein.

- Excerpts from the book Artificial Intelligence: A Modern Approach by Stuart Russell and Peter Norvig
